CAROUSEL

A free adversarial test corpus for document AI

52 synthetic edge-case files across three domains, each with an expected result. MIT licensed, plain files, in the repo.

What is in it

Chat messages, emails, CSV rows, JSON records and PDF-style reports. Asset reliability has 20 files, process exceptions 16, document assurance 16. The gold entries hold 143 expected observations.

Prompt injection in four formats

Orders to ignore prior rules and approve the case, placed in a chat or email, a CSV cell, a JSON field and a PDF text page. Twelve files in all.

Look-alike IDs

A Cyrillic "A" in "A-142", a Cyrillic "B" in a batch ID, fullwidth digits in a contract reference, a smudged "A-14_" tag.

Negations that mention the risk

A report that no wear was observed on the brake assembly. A batch ruled out as supplier-related. A subject line saying Clause 8.2 does not apply to Project Harbor.

Duplicates, exact and near

Exact duplicates and a near-duplicate of an earlier file. Counting the same event twice is the failure.

Payloads aimed at the UI and exports

A script tag, a javascript: link, an =HYPERLINK formula in a CSV cell, a 3,000-character run of the letter a, combining marks, a right-to-left override.

Missing, conflicting and thin evidence

A missing asset ID. Conflicting dates. A high-risk item with no supporting evidence. Each one tests whether an extractor guesses.

How to use it

Open scenario-packs/*/fixtures/edge-cases. Each fixture has an expected extraction and a gold entry. Run your extractor, diff the results. Link in the first comment.

Asset Reliability

Guided tour · about 5 minutes

Connect scattered field reports, maintenance records and inspection documents into one reliability picture before a repeat fault becomes a safety incident.

SOURCES

Field messages, Maintenance exports, Inspection documents

YOU WILL REACH

Process Exception Management

Guided tour · about 5 minutes

Follow a process deviation from a single shift note through confirmation, escalation and a formal hold request — without it going quiet between shifts.

SOURCES

Shift reports, QC readings, Supervisor requests

YOU WILL REACH

Limits

Synthetic and small. Language coverage is thin: one file is in Spanish. PDFs are text-layer stand-ins, not scans. The expected answers are our own judgement.
